Notice Concerning Calculation of Ichthys LNG Emissions

TOKYO, JAPAN - [INPEX CORPORATION](#) (INPEX) has identified errors in the way some emissions from the Ichthys LNG onshore facility at Bladin Point near Darwin in the Northern Territory of Australia have been calculated and reported to the Northern Territory Environment Protection Authority (NT EPA).

Ongoing air quality monitoring in the Darwin region has consistently shown emissions levels are well within government guidelines, suggesting no increased health risk to the community, the local workforce or the environment from the Ichthys LNG facility.

Darwin benzene air quality levels, which are less than 0.0006 parts per million, are at least five times lower than monitoring investigating levels (MIL), which are set by the Australian government in the National Environmental Protection Measure (NEPM). For benzene, the MIL is 0.003 parts per million.

A review, conducted by INPEX and completed in October 2025, examined emissions calculations from the facility for the 2023-2024 Australian financial year (July 1, 2023 to June 30, 2024) and identified discrepancies between reported and actual emissions including total volatile organic compounds (VOCs) benzene, toluene, ethylbenzene and xylene (BTEX). Emissions calculations for previous years are currently under review.

Working safely is INPEX's priority, always. This commitment underpins the company's approach to protecting people and the environment. INPEX takes full accountability for these identified errors and assures the community it has not intentionally misreported any of the errors in the emissions calculation.

The following reported and recalculated Australian national pollutant inventory (NPI) emissions were presented to the NT EPA at its scheduled board meeting held on October 22, 2025.

NPI TVOC and BTEX emissions data (tons)	23/24 NPI reported	23/24 NPI recalculated	24/25 NPI reported
Total VOCs	1,618.83	3,562.3	4,324.4
Benzene	4.12	556.9	541.7
Toluene	5.05	569.8	469.7
Ethylbenzene	0.90	0.89	1.14
Xylene	1.95	1.98	61.6

INPEX is committed to continue working closely with the NT EPA and NT regulators.

About INPEX

INPEX is Japan's largest exploration and production (E&P) company, engaged in the development and operation of oil and gas projects worldwide. We are committed to contributing to a brighter future by delivering energy in a sustainable way. As part of this commitment, we are also engaging in lower-carbon solutions such as CCS, hydrogen and integrated power supply, while pursuing new opportunities in the evolving energy landscape.
